STUDIO CONCCUBE

CONCRETE ENGINEERING

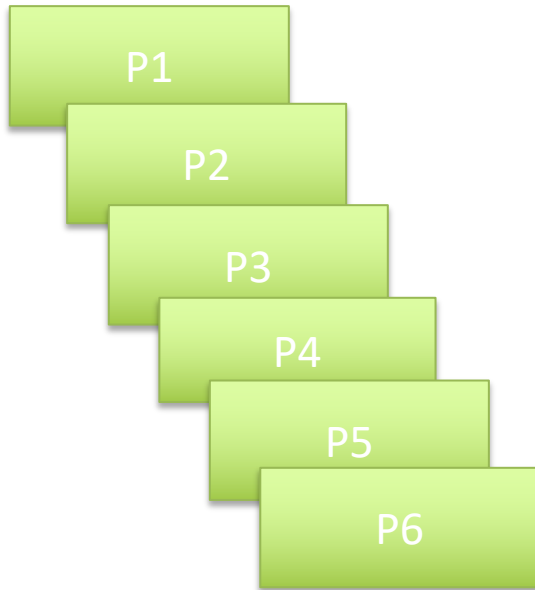

CONCCUBE is an innovative concrete engineering to give seamless surfaces on floor. Though the same engineering can be used on wall surfaces or even ceiling surfaces . Due to its natural concrete look it gives soothing environment to any place.

DEPLOYMENT

CONCCUBE deployment is a multi layer deployment process. There are mainly 6-7 layers will be applied on – respective surface. Again it depends on the type of surface and the finishes required by the architect.

Each layer will be further sanded by sanding machines and cleaned by mope with water. The process has been designed such a way that each layer gives strength to the product. Sealers will be applied after achieving the desired smoothness of the surface. Different types of sealers can be used.

PROCESSES

P1 Rough The Surface

P2 Base Coat Application & Sanding

P3 Finish Coat Application & Sanding

P4 Finish Coat Application & Sanding

P5 Densification / Sealing

P6 Policing / Buffing
